I build software with Claude Code and treat its work like a new teammate's: I read every change, test it, and write a failing test before I fix a bug. The rules it follows are mine, kept in a "brain" that grows each time a mistake teaches me something. On my own time I build tools for small shops and live events.

EXPERIENCE

Junior AI Engineer · MSMA, Cebu City — Sep 2026 – present

- Build and test features for an in-house software product that has not launched yet.
- Review AI-written code before it merges and add a regression test with every bug fix.

Web Developer Intern · Alpha Insurance & Surety — Feb – Apr 2025

- Led the build of a bail bonds records system that replaced manual encoding with searchable records.
- Kept it running after launch and fixed the issues staff reported.

Software Implementor Intern · Cebu Innosoft Solutions Services Inc. — Sep – Oct 2024

- Tested a point-of-sale system before client rollout and wrote bug reports the developers could reproduce.
- Wrote implementation notes and training guides for client staff.

PROJECTS

Pageant scoring network · live event, two nights · Windows, batch scripts, Excel — 2026

- Set up a private network for the tabulation team: encoder laptops find one host laptop by name, then by address. I set up and tested the encoders over a phone hotspot on the drive, so only the host was left for the venue.
- Both nights ran without lag: encoders saved one at a time, every few candidates, so no two saves hit the shared workbook together.

Messenger inquiry desk · for small shops · n8n, Google Sheets — 2026, in testing

- Replies to price questions on a Facebook Page using prices the owner keeps in a Google Sheet, so changing a price needs no code.
- Built and tested on my own Page; a week of real use comes next, before I offer it to anyone.

This portfolio and Claude Bar · own tools · React, Python — 2026

- Portfolio in React and Vite on GitHub Pages. Claude Code drafts each change; I review it before it ships.
- Claude Bar: a desktop helper I use every workday to see what the team pushed and what needs my review.

SKILLS

Web	TypeScript, JavaScript, React, Angular, Node.js, REST APIs, HTML, CSS, Tailwind CSS
AI and automation	Claude Code (my own rule set and review flow), n8n, API integration
Data and tools	MySQL, Excel, Git, GitHub, VS Code, Windows networking

EDUCATION AND CERTIFICATES

BS Information Technology · University of Cebu — 2025

TVL Computer Programming · College of Technological Sciences Cebu — 2019

Google IT Support Certificate — ID M9WPKPBQEDGZ

Microsoft IT Support Specialist — ID K1V9PSQ9X0PC
